

The K block shown here is located on inside edge of Rib 7 and bonded to the gusset (not shown) which would be on the inside (wing tip end) of Rib 7.

Also would be two very short little 1/4" x 1/4" x 1" long rib portions glued above and below the K block. Sand cusp side to match the profile of the K block.

Where only the gusset is show, would be the K block gusset. Match leading edge of K block and the Gusset to be flush with each other.

All shapes and dimensions based on easy part cut outs following supplemental plans only. Aileron is the same size as the original plans only the build procedure is slightly different.
